SUMMARY

Entry-level Backend Developer with hands-on experience in building RESTful APIs using Java and Spring Boot. Familiar with microservices concepts, database design, and backend system development through academic and personal projects. Interested in building scalable and reliable backend systems.

EDUCATION

Medicaps University, Indore 2024 – 2026
Master of Computer Applications (MCA)

Medicaps University, Indore 2021 – 2024
Bachelor of Computer Applications (BCA)

TECHNICAL SKILLS

Languages: Java, SQL

Backend: Spring Boot, REST APIs

Tools & Frameworks: Spring Data JPA, Spring Security, Hibernate, Docker (Basics), Git, GitHub

Databases: PostgreSQL, MySQL

Concepts: Microservices (Basic), API Design, Authentication (JWT)

PROJECTS

Cloud-Native E-Commerce Platform | *Spring Boot, Kafka, Docker, Zipkin, Resilience4j* | [GitHub](#) 2026

- Developed a distributed e-commerce backend utilizing Spring Boot and Spring Cloud to manage 5 independent microservices.
- Configured a Spring Cloud API Gateway to act as a centralized entry point for routing requests and validating JWT authentication.
- Integrated Apache Kafka for asynchronous communication between Order and Payment services, gaining hands-on experience with event-driven architecture.
- Utilized Resilience4j circuit breakers and OpenFeign to handle fault tolerance during synchronous inter-service communication.
- Containerized the application ecosystem, databases, and message brokers using Docker Compose to enable a consistent, one-click local setup.
- Added distributed tracing via Zipkin and Micrometer to monitor API request flows and debug latency across containers.

Manufacturing Order Management System | *Java, Spring Boot, PostgreSQL, JWT, Docker* | [GitHub](#) 2026

- Developed a backend system to manage complete order lifecycle including sales, inventory, invoices, and payments.
- Designed RESTful APIs using Spring Boot and secured endpoints with Spring Security and JWT-based authentication.
- Modeled relational database schema (11 tables) using PostgreSQL and Hibernate ORM.
- Handled transactional workflows ensuring data consistency for stock updates and invoice processing.
- Implemented validation, global exception handling, and API documentation using Swagger/OpenAPI.
- Wrote 50+ unit and integration tests using JUnit 5 and Mockito.
- Deployed containerized application using Docker with cloud-hosted PostgreSQL.

CERTIFICATIONS

- J.P. Morgan - Software Engineering Job Simulation – Forage
- AWS Fundamentals Specialization – Coursera

EXTRACURRICULAR ACTIVITIES

- Technical Fest Volunteer – Coordinated events and assisted participants in university-level technical fest.
- Cricket (Inter-College Tournaments) – Represented university and secured 17 wickets across tournaments.
